STEP-BY-STEP PROCEDURE

Creating an Event Poster in Adobe Photoshop

Name: Aryan Atreya **CU ID:** CU25870028

Objective

To create an attractive event poster using Photoshop tools, layers, masks, filters, blending modes, brushes, and text effects.

1. Choose an Event and Create a Document

Choose an event, such as *Tech Fest 2026*. Open Adobe Photoshop and create a new A4 or poster-size document. Set the required dimensions and resolution.

2. Build the Background and Place Images

Create the background using colors, gradients, or textures. Place relevant images. Use the **Quick Selection Tool** and **Select and Mask** to select and cut out the main subject cleanly.

3. Blend Images and Adjust Colors

Use a **Layer Mask** to blend images smoothly without permanently deleting parts of a layer. Add an **Adjustment Layer** to improve the overall color, brightness, and contrast.

4. Apply a Filter and Blending Mode

Apply a filter such as **Gaussian Blur** to the background to make the main subject stand out. Add a texture layer and try a blending mode such as **Overlay** to create depth.

5. Add a Custom Brush Effect

Use a suitable brush to add effects such as sparkles, light particles, or grunge edges. Keep the effects balanced so the poster remains clear and readable.

6. Add Event Details and Style the Title

Add the event name, date and time, venue, and organizer or department. Make the event title prominent and apply a **Layer Style**, such as a drop shadow, stroke, or glow.

7. Organize, Save, and Export

Group and rename layers clearly, for example: **Background**, **Subject**, **Title**, and **Details**. Save the editable project as a **PSD** file, then export a final copy as a **JPG** for sharing or printing.

Result

An event poster is created using Photoshop tools and effects, with organized layers and both editable (PSD) and final (JPG) versions saved.
